**How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice)** By Michael J. Campbell, Stephen J. Walters

## A complete guide to understanding cluster randomised trials

Written by two researchers with extensive experience in the field, this book presents a complete guide to the design, analysis and reporting of cluster randomised trials. It spans a wide range of applications: trials in developing countries, trials in primary care, trials in the health services. A key feature is the use of R code and code from other popular packages to plan and analyse cluster trials, using data from actual trials. The book contains clear technical descriptions of the models used, and considers in detail the ethics involved in such trials and the problems in planning them. For readers and students who do not intend to run a trial but wish to be a critical reader of the literature, there are sections on the CONSORT statement, and exercises in reading published trials.

- Written in a clear, accessible style
- Features real examples taken from the authors' extensive practitioner experience of designing and analysing clinical trials
- Demonstrates the use of R, Stata and SPSS for statistical analysis
- Includes computer code so the reader can replicate all the analyses
- Discusses neglected areas such as ethics and practical issues in running cluster randomised trials

*How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research* provides an excellent reference tool and can be read with profit by statisticians, health services researchers, systematic reviewers and critical readers of cluster randomised trials.

## **Editorial Review**

### Review

“Overall, the reviewers are enthusiastic about the book. The authors have covered all important areas of cRCTs, using a practical and pragmatic approach to the topic. The code is helpful for the practical implementation of the examples. The material is simple to understand, which will appeal to applied researchers, not only to biostatisticians. As such, we clearly recommend this book to all researchers interested in cRCTs. For biostatisticians involved in cRCTs and investigators of cRCTs, it is a must-have on the bookshelf.” (*Biometrical Journal*, 1 May 2015)

## **Users Review**

### **From reader reviews:**

#### **Lauren Marine:**

This How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice) book is not ordinary book, you have it then the world is in your hands. The benefit you receive by reading this book is definitely information inside this guide incredible fresh, you will

get data which is getting deeper a person read a lot of information you will get. That How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice) without we know teach the one who reading through it become critical in imagining and analyzing. Don't always be worry How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice) can bring any time you are and not make your tote space or bookshelves' turn into full because you can have it in the lovely laptop even phone. This How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice) having good arrangement in word as well as layout, so you will not really feel uninterested in reading.

**Marian Sheffield:**

Exactly why? Because this How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice) is an unordinary book that the inside of the e-book waiting for you to snap it but latter it will zap you with the secret the item inside. Reading this book adjacent to it was fantastic author who all write the book in such wonderful way makes the content on the inside easier to understand, entertaining method but still convey the meaning completely. So , it is good for you for not hesitating having this any longer or you going to regret it. This unique book will give you a lot of gains than the other book include such as help improving your skill and your critical thinking technique. So , still want to hold off having that book? If I had been you I will go to the reserve store hurriedly.

**Jennifer Joseph:**

You can spend your free time to see this book this guide. This How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice) is simple bringing you can read it in the recreation area, in the beach, train as well as soon. If you did not possess much space to bring often the printed book, you can buy often the e-book. It is make you better to read it. You can save often the book in your smart phone. Thus there are a lot of benefits that you will get when one buys this book.

**David McClure:**

E-book is one of source of understanding. We can add our knowledge from it. Not only for students but also native or citizen require book to know the up-date information of year to help year. As we know those ebooks have many advantages. Beside many of us add our knowledge, can bring us to around the world. Through the book How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice) we can take more advantage. Don't you to be creative people? For being creative person must like to read a book. Only choose the best book that ideal with your aim. Don't possibly be doubt to change your life by this book How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice). You can more inviting than now.
